SUMMARY

AI/ML & Full-Stack Engineer with 6+ years of commercial software experience and an MSc (Honors) in Robotics and Artificial Intelligence from ITMO University. Ships production ML and LLM systems end to end: a RAG-based AI agent (LangGraph, Weaviate, FastAPI) with Arize Phoenix observability, and a recommendation system for a supermarket chain, validated through A/B testing. Combines deep learning (Python, PyTorch) with solid engineering practice (Django, PostgreSQL, Docker, Linux, Clean Architecture) and a record of Flutter and React products published to the App Store and Google Play.

EXPERIENCE

Machine Learning & Full-Stack Engineer — Independent IT Consultant (Freelance) Dec 2022 – Present

- Designed and built the backend of an agentic RAG chatbot for a restaurant chain (bilingual RU/EN menu and FAQ): a LangGraph agent with hybrid vector and keyword search over Weaviate Cloud, served through FastAPI, with answers grounded in the client's knowledge base. Pre-release.
- Implemented logging, monitoring and observability with Arize Phoenix to trace and debug the agent.
- Delivered an AI agent-based chatbot engagement for a gym client.
- Launched a live prototype on a sample English-language menu, with a web chat page and a Telegram bot sharing one agent. Live: wagami-rag-en-staging.onrender.com · [@wagami_restaurant_bot](https://t.me/wagami_restaurant_bot)
- Built a recommendation system for a supermarket chain from scratch on transactional and user data, combining deep learning and classical ML (Python, PyTorch, Transformers).
- Owned the full ML lifecycle: data collection, EDA, prototyping, inference, monitoring and support.
- Planned, ran and evaluated A/B tests to validate new algorithms and improve conversion metrics; built dashboards and visualizations that surfaced customer behavior patterns and business insights.
- Developed backend logic and REST APIs (Python/Django, PostgreSQL) to serve ML models in production as microservices.
- "My Car" automotive IoT telematics: contributed to a system that ingests and processes streaming in-vehicle sensor data, and built the Flutter app that visualizes it in real time (Streams/WebSockets, Firebase, push notifications).
- Built Flutter and React interfaces for internal tools and client projects; containerized and deployed applications with Docker on Linux, following Clean Architecture.

Full-Stack Engineer (Flutter, Django, React) — VRoad Oct 2021 – Nov 2022

- Delivered commercial products end to end: Flutter apps (iOS/Android, published to the App Store and Google Play) with a Python/Django backend and a React web front end, across e-commerce, AdTech and MedTech.
- E-commerce: Tzakartk, an international shopping and gift-delivery app for Syria (MVC), and Danshop, an online shopping app (Provider).
- Go Public (AdTech): TV, radio and social media advertising platform on a scalable Bloc architecture.
- Adiwah (MedTech): medication and doctor-appointment tracker with smart reminders (MVVM, GetX).
- Backend: designed relational schemas and RESTful JSON APIs in Django (PostgreSQL, MySQL), documented in Swagger, with WebSockets for real-time updates.
- Data and cloud: SQLite locally; Firebase (Firestore, Realtime Database, Cloud Storage, Cloud Messaging); async flows with Future/Stream; user-event analytics collection.

Full-Stack Instructor & Developer (Flutter, Django) — Teaching Flutter

Jan 2021 – Jun 2021

- Taught a Flutter course (state management, architecture, REST APIs) to computer science students.
- Built "Clinics" end to end: a Flutter patient app with a Django REST backend for medication schedules, clinic appointments, similar-medication suggestions and drug-interaction warnings.

Full-Stack Developer (Flutter, Django, React) — Easy Soft

Dec 2019 – Nov 2021

- Developed and maintained Paprika, a FoodTech platform for restaurant table booking, food ordering and delivery: a Flutter mobile app, a Python/Django backend and a React web interface.
- Mobile: Flutter client with Firebase authentication, push notifications and real-time databases, plus a real-time courier-tracking module with live geolocation streams.
- Backend: REST APIs documented in Swagger, PostgreSQL storage and WebSockets/Streams for live order and courier updates; Git, Docker and Linux for delivery.

EDUCATION

MSc (Honors), Robotics and Artificial Intelligence — ITMO University

Oct 2023 – Jul 2025

Saint Petersburg, Russia

- Thesis: "Real-Time Visual Object Tracking Methods with Deep Learning Techniques."
- Coursework: Machine Learning in Robotics, Applied AI in Science and Business, Big Data Storage.

SKILLS

Machine Learning & Data Science: Python, PyTorch, TensorFlow, Transformers, scikit-learn, pandas, Machine Learning, Deep Learning, Artificial Neural Networks, Reinforcement Learning, NLP, Recommendation Systems, Computer Vision, Image Processing, OpenCV, EDA, Data Visualization, A/B Testing

Generative AI & LLMs (applied): Retrieval-Augmented Generation (RAG), AI Agents, LangChain, LangGraph, Large Language Models (LLMs), Generative AI, Weaviate, Arize Phoenix

Backend & Web: FastAPI, Django, REST API, GraphQL, WebSockets, Swagger, React

Mobile: Flutter, Dart, Bloc, GetX, Provider, Android, Kotlin

Databases & Cloud: PostgreSQL, MySQL, SQLite, SQL, Firebase (Firestore, Realtime Database, Auth, Cloud Messaging)

Engineering Practices & Tools: Clean Architecture, MVVM, MVC, OOP, Docker, Linux, Bash, Git

CERTIFICATIONS

- Generative AI with Large Language Models — DeepLearning.AI (Jul 2026)
- Retrieval Augmented Generation (RAG) — DeepLearning.AI (Jul 2026)
- AI Agents in LangGraph — DeepLearning.AI (Jun 2026)
- Functions, Tools and Agents with LangChain — DeepLearning.AI (Jun 2026)
- LangChain for LLM Application Development — DeepLearning.AI (Jul 2026)
- LangChain Chat with Your Data — DeepLearning.AI (Jul 2026)
- Knowledge Graphs for RAG — DeepLearning.AI (Jun 2026)
- Robotics and Artificial Intelligence (Sber × ITMO) — Sberbank-Technology (Jul 2025)
- Docker Certified Associate Exam Prep Specialization — LearnKartS (Jul 2026)
