[DATE]

Hiring Manager
[COMPANY NAME]

Dear Hiring Manager,

I'm writing to apply for the [JOB TITLE] role at [COMPANY NAME]. I hold an MSc (Honors) in Robotics and Artificial Intelligence from ITMO University, where my thesis explored real-time visual object tracking using deep learning, and I've since built on that foundation with hands-on AI/ML delivery experience spanning research, industry, and independent client work.

At IROS-System, I brought applied ML into an industrial CAD and manufacturing workflow, developing a cost-prediction regression model and a cosine-similarity-based part-matching system directly from BOM and assembly data. Alongside this, as a Freelance AI/ML Engineer, I designed and shipped an agentic RAG chatbot backend for a restaurant chain — built on FastAPI, LangGraph, and Weaviate Cloud, with production logging and observability through Arize Phoenix — and later adapted the same architecture for a gym client.

This is paired with over seven years in mechatronics and robotics: designing a high-precision Delta Linear Robot, supervising robotics capstone projects, and teaching CAD and automation to more than 100 students at HIAST. Together, this gives me range across the full stack of an AI/ML or hybrid AI-robotics role — from model development through to the production and physical systems those models ultimately need to run in.

I'd welcome the chance to discuss how this background could support [COMPANY NAME]'s goals in more detail. Thank you for your consideration — I look forward to the possibility of speaking further.

Sincerely,

Ali Haidar
