[DATE]

Hiring Manager
[COMPANY NAME]

Dear Hiring Manager,

I'm writing to apply for the [JOB TITLE] role at [COMPANY NAME]. I hold an MSc (Honors) in Robotics and Artificial Intelligence from ITMO University, where my thesis focused on real-time visual object tracking using deep learning, and I bring hands-on AI/ML delivery experience across research, industry, and freelance work.

As a Freelance AI/ML Engineer, I designed and shipped an agentic RAG chatbot backend for a restaurant chain, using FastAPI, LangGraph, and Weaviate Cloud for retrieval, with logging and observability via Arize Phoenix — work that's since extended to a similar engagement for a gym client. In parallel, at IROS-System I built a cost-prediction regression model and a cosine-similarity-based part-matching system from BOM and assembly data, applying applied machine learning inside an industrial CAD/manufacturing workflow.

My background also includes 7+ years in mechatronics and robotics — from designing a high-precision Delta Linear Robot to supervising robotics capstone projects and teaching CAD and automation to 100+ students at HIAST. This combination lets me work across the full stack of an AI/ML or hybrid AI-robotics role: from model development to the physical or production systems those models ultimately need to run in.

I'd welcome the opportunity to discuss how this background could contribute to [COMPANY NAME]'s work. Thank you for your time and consideration.

Sincerely,

Ali Haidar
